

This is geography

Global warming
Food production
Agriculture
Water resources
Drought
Economy

Geography matters more than ever

Our world faces many challenges. Climate change. Fresh water. Biodiversity. Feeding a growing population. And the endangerment of at least one species in Canadian classrooms — geography.

Geographic literacy is important because it helps us understand an increasingly complex world, our place within it, and how our choices impact those around us. So why is it disappearing from our schools?

Keep geography alive. Take the Public Challenge today.
